INSTALLATION

Installation of this module is simple and fast. Attending these steps we will have installed it in a few minutes in our Prestashop platform.

1. Go to the Modules Menu > Modules and Services
2. Click on Add a new module (on the top right corner)

3. Click on choose a file
4. Select the lgcanonicalurls.zip file
5. Click on upload this module

A screenshot of the "ADD A NEW MODULE" form. It has a header "ADD A NEW MODULE" and a note below it: "The module must either be a Zip file (.zip) or a tarball file (.tar, .tar.gz, .tgz)." There are three input fields: "Module file" with the value "lgcanonicalurls.zip", "Choose a file" (a browse button), and "Upload this module" (a button with an upward arrow icon).

6. Find the Canonical URLs to Avoid Duplicate Content – SEO
7. Click on Install

A screenshot of the module details page for "Canonical URLs to Avoid Duplicate Content - SEO v1.0.0 - by Línea Gráfica". It shows a brief description: "Add canonical tags to your pages in order to avoid duplicate content and improve your SEO." To the right is a green "Install" button with a plus sign icon and a dropdown arrow.

8. Click on Configure

A screenshot of the module details page for "Canonical URLs to Avoid Duplicate Content - SEO v1.0.0 - by Línea Gráfica". It shows the same brief description. To the right is a "Configure" button with a wrench icon and a dropdown arrow.

CONFIGURATION

On this page, you can set the general configuration for canonical URLs (this default behavior will apply to all your pages).

If you want to set a custom canonical URL for a specific product, category, CMS, page...then go to the configuration of this page and choose the option "Custom URL".

1. Write your favourite domain (without the last slash "/", or the suffix "/index.php", or the "/index.php" suffix, or the "http(s)://" prefix)

Main domain:

Choose the domain name you want to include in the canonical URL (ex: www.mydomain.com or mydomain.com). Do not include the last slash "/", or the "/index.php" suffix, or the "http(s)://" prefix.

If you are on the page www.domain2.com/product1.html and you set www.domain.com as your main domain, the canonical URL displayed on the code of this page will be <link rel="canonical" href="www.domain.com/product1.html"/> (the module replaces the domain) in order to tell Google that the main domain is this one.

2. Force to add http:// or https:// before the domain

* Force to use HTTP or HTTPS:

YES

NO

If you enable this option, choose below the type of protocol (HTTP or HTTPS) you want to apply.

Force HTTPS for the canonical URL

Force HTTP for the canonical URL

Automatically add HTTP or HTTPS before the domain of the canonical URL.

The module will force to add "http://" or "https://" in the canonical URL <link rel="canonical" href="https://www.domain.com/product1.html" /> to avoid duplicate content between <http://www.domain.com/product1.html> and <https://www.domain.com/product1.html> for example.

3. Ignore parameters in the canonical URL

* Ignore parameters: YES NO

Enable this option if you want to ignore parameters from the canonical url.

live_configurator_token, id_employee

List the parameters you want to exclude from the canonical URLs (do not include the sign "?" and separate each parameter with a comma and a space ", ".

If you have urls with parameters and want to remove them from the canonical URL to avoid duplicate content, as for example between <https://www.domain.com/product1.html> and https://www.domain.com/product1html?live_configurator_token=00&id_employee=1, you just need to list the parameters (without ? and & and separate them with a coma and a space) and these parameters will be automatically removed from the canonical URLs.

4. Enable this option if you want to make the canonical URL visible by web browsers in the HTTP header of the page.

* HTTP headers: YES NO

Visible by web browsers only. Enable this option if you want web browsers to see the canonical URL inside the HTTP header of the page.

This option is visible only by browser. You can test it on the website <http://web-sniffer.net/>. If this option is enabled, an extra ligne will be displayed.

HTTP Response Header

Name	Value
Status: HTTP/1.1 200 OK	
Set-Cookie:	prestashopfr1BAK=R4178274076; path=/; expires=Mon, 11-Jan-2016 11:52:40 GMT
Date:	Mon, 11 Jan 2016 10:48:00 GMT
Content-Type:	text/html; charset=utf-8
Transfer-Encoding:	chunked
Connection:	close
Set-Cookie:	prestashopfr1=R2804833050; path=/; expires=Mon, 11-Jan-2016 11:52:20 GMT
Server:	Apache
P3P:	CP="IDC DSP COR CURa ADMa OUR IND PHY ONL COM STA"
Link:	< https://www.domaine.com/en/printed-dress.html >; rel="canonical"
Set-Cookie:	PrestaShop-463b9ea252f34f2321d79aab5004438c=esmSf4UDwslA1112swKnpwVRoXwbvnyifpWovC expires=Sun, 31-Jan-2016 10:47:57 GMT; path=/; domain=lineagrafica.pswebshop.co
Vary:	Host,Accept-Encoding
Content-Encoding:	gzip

5. Click on the button Save.

To see the canonical URL, you just need to open the page in your front-office, do a right-click, click on "Source code of the page" and look for the expression "canonical" (you can use CTRL + F).

This module has new features in versión 1.7 of Prestashop.

You can see the following new functions:

1. Ignore Attribute: This option must always be selected as "NO". You must activate this option only if you want to delete the attribute id from the product canonical url.

Ignore attribute:

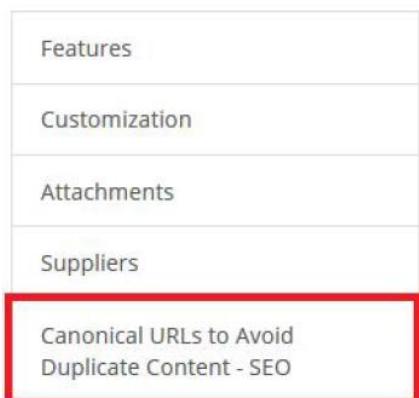

2. Do not use Core canonical option: Only enable this option if your Prestashop theme has not variables activated. Then you can select this option.

* Do not use Core canonical option

Enable this option if don't have canonical tag on Prestashop 1.7 with your theme.

CUSTOM CANONICAL URL

- a. Go to the Menu "Catalog / Products", "Catalog / Categories" o "Preferences / CMS" and click on "Edit".
- b. Click on the tab "Canonical URLs"

- c. Choose the option "Custom URL"

URL configuration: By default
 Custom URL

If you choose the option "By default", the module will apply the canonical URL configuration set in the module interface.

- d. Set the custom canonical URL (without http(s)://) in all your languages

Custom URL: en ▾

Write here the custom canonical URL for this page. Please do not include http:// or https://.

- e. Click on the button Save.

To see the canonical URL, you just need to open the page in your front-office, do a right-click, click on "Source code of the page" and look for the expression "canonical" (you can use CTRL + F)

YOUR OPINION
